The Light Directory “NEW LED Products for the marketplace”

West Caldwell, NJ, August 2010 - The widely read [Light Directory](#) is an on-line website featuring the latest advances in lighting products. It has over 50,000 designers, architects, and institutional customers as members, with approximately three times that number in e-mail recipients around the US.

MaxLite's LED Flat Panels were featured in the New Products section of this month's directory and showcase.

Readers of The Light Directory are told NEW LED Products for the marketplace"...cont.

The Led Flat panels are designed for installation in drop ceilings and are typically used to replace standard 2x2 and 2x4 fluorescent fixtures. They have a slim 3 inch profile making them ideal for low depth ceiling cavities. The housing, the back panel, and the trim are all aluminum, providing maximum heat sink and thermal control capabilities. The lens is a translucent white polycarbonate.

All models are fully dimmable with a smooth 12 level remote dimmer, and are compatible with all building automation protocols, taking advantage of dimming, daylight harvesting, shade controls and occupancy sensors.

In addition, the MaxLite Architect Flat Panels have been successfully CALiPER tested. IES and Photometric files are available and MaxLite will provide lighting layouts where needed.

The panels are mercury and UV free, have a 50,000 hour life (based on L70 standards) and are warranted for 5 years. They are available in 3500K and 5000K.
